**No adjustment when mounting at right angle; 1/4" allowed for pivot point*

The RX Series is the only gate that requires a swing direction to be specified because the mounting plate is at the top of the gate rather than the center and, therefore, cannot be reversed (flipped) to fit both the right and left hand side of a handrail.

RX Series safety gates have an L (left) or R (right) designation. This designation indicates the direction the gate swings when you push the gate open to walk through the protected opening.

The standard sizes listed above are stock items. FabEnCo also manufactures custom safety gates for wider openings or unusual rail configurations. Please contact us with your special requirements.
